

Decision Package Summary

Decision package summary as of 2026-04-30

Analysis end: 2026-04-30 Investor currency: USD

This summary projects existing decision JSON artifacts. It is not trade advice and does not execute orders.

Comparison highlights

Candidate menu

Intended menu: default_v1 (16/16 candidates scored).

Product reference menu: default_v1 (16/16 scored).

Starting portfolio: Current Portfolio: CAGR 9.9%, vol 9.6%, max DD -19.8%, stress Diagnostic review

Robustness scorecard

Favored profile not scored in robustness scorecard.

Portfolio health score

Favored profile not scored in health score.

Selection

Status: Favored profile selected for further review.

Favored profile: Risk Parity Portfolio

Favored profile: Risk Parity Portfolio for this comparison.

Versus starting portfolio: Material benefit versus Current Portfolio may warrant review.

Trade-offs

Comparing Current Portfolio to Risk Parity Portfolio: 6 improving dimension(s), 2 worsening dimension(s).

Comparing Current Portfolio to Risk Parity Portfolio: 6 improving dimension(s), 2 worsening dimension(s). Improvements include: risk_vol, drawdown, stress_worst_loss, stress_overall. Trade-offs include: return_cagr, risk_adjusted_sharpe. Estimated weight turnover (half-sum) is 17.9%. This summary is diagnostic only and does not instruct trading.

Turnover (half-sum): 17.9%

Model risk

Overall severity: low

Model-risk flags are present but none are high severity.

Assumption sensitivity

Stability: stable

Favored stable rate (Tier A): 100.0%

Risk Parity Portfolio remained favored in 8 of 8 selection-weight variants (100%). Selection weights are stable, but single-metric window leaders sometimes differ.

Pareto / dominance

Efficient set: 16 profile(s); dominated: 2.

16 candidate(s) are on the Pareto-efficient set; 2 are dominated on return, risk, drawdown, and stress when applicable. The selection favorite (Risk Parity Portfolio) is not dominated on the evaluated metrics.

Regret analysis

Status: partial

Favored worst regret: 0.177 (recession_severe).

Under the favored profile (Risk Parity Portfolio), worst stress regret versus the best available candidate is 17.7% in scenario recession_severe.

Action plan

Status: trades_for_review

Turnover (half-sum): 17.9%

Portfolio-first review uses analysis_subject as the baseline; legacy current-vs-policy status is compatibility-only for this run.

For review (not execution instructions):

BND buy $\Delta w = 0.064$ (6.4%)

GLD buy $\Delta w = 0.02$ (2.0%)

QQQ sell $\Delta w = -0.052$ (-5.2%)

SCHD sell $\Delta w = -0.067$ (-6.7%)

SCHP buy $\Delta w = 0.096$ (9.6%)

... and 3 more in action_plan.json

Monitoring — What Changed

Diff status: no_prior_snapshot

This is the first stored monitoring snapshot for analysis ending 2026-04-30. No prior snapshot is available for comparison. Future runs will show What Changed when a previous snapshot exists under monitoring/latest/.

Decision journal

Generated decision record: see `decision_journal.json`, `journal/latest/`, and `journal/history/`.
