

Risk-Parity Portfolio Weights Report

Report Scope

- **Source:** risk_parity_portfolio/weights.txt
- **Portfolio type:** Risk-Parity
- **Fields reported:** capital weight and RC_vol

Executive Summary

- Capital weights are diversified but non-uniform, with larger allocations to defensive sleeves.
- Reported RC_vol remains concentrated in a subset of assets despite broad holding count.

Allocation and RC Table

Concentration Snapshot

- **Top-5 by weight:** BIL (11.5%), SCHP (10.5%), BND (10.4%), VOO (6.8%), VDC (5.9%).
- **Top-5 by RC_vol:** ROBO (9.7%), VOO (9.5%), SLV (8.7%), QQQ (8.0%), VT (7.7%).
- Weight concentration and risk concentration are not identical, consistent with risk-parity mechanics.

Conclusion / Key Takeaways

- Capital allocation is more defensive at the top weights, but risk contribution still clusters in selected growth/commodity sleeves.
- Reported profile aligns with a risk-budgeting approach rather than equal capital distribution.
